PROJECT

POS (Point of sale)- Manajemen cafe

CafePOS is a web-based Point of Sale system designed to help manage café operations efficiently.

The application includes features such as menu management, table management, cashier system, income tracking, and monthly sales charts.

With this system, admins and cashiers can easily manage menus, handle orders, record transactions, and monitor income in real time through an interactive dashboard and monthly reports.

Hospital finder - Mobile App

Hospital Finder application. This application helps people in Padang find hospital information easily. I created this application using the Dart programming language with Flutter, using Visual Studio Code as the main development tool. Google Maps API to show the location of the hospital. The design is simple and clean. This application works on Android and iOS
